Special interest in orthodontic aligner treatments, general and cosmetic dentistry

Taylor Matthews

Oral Health Therapist with a special interest in children's dentistry

Michelle Vegar

Dental Therapist with a special interest in myofunctional therapy

Dental Implants

Do you suffer from damaged, decaying or missing teeth?
Are you concerned about or currently experiencing just how uncomfortable and frustrating removable dentures can be?

Losing a tooth or multiple teeth can be distressing and upsetting, but it doesn't have to affect your smile and confidence forever.

We understand and feel your frustrations, and with our implant dentistry solutions, we can help. Dental implants are a long-term, fixed solution that will ensure your new implant tooth (or teeth) are high-quality and remarkably resemble natural teeth.

The top reasons for Dental Implants

Advanced gum disease
(otherwise known as
periodontitis)

Accidental injury or trauma
that occurred either
recently or earlier in life

Congenitally missing teeth

Failed root canal

Old dental bridge
replacement

The many benefits of Dental Implants

Dental implants are a popular restorative dental technique used to replace a missing tooth. They're frequently chosen and loved by both dentists and dental patients as an alternative to dentures.

Why? Because unlike dentures:

- Dental implants don't need to be taken out for cleaning
- There's no limit whatsoever to the foods you can enjoy
- They feel and look amazingly like real teeth
- Unmoveable = comfortable. Essentially, your dental implants will become a part of you!
- Minimal upkeep down the track ensures you're getting a long-lasting, easy smile solution
- Your oral health and confidence about your smile will undoubtedly improve
- 95 - 97% success rate
- Costs are lower than a traditional dental bridge long-term

The range of Dental Implant options available

All-on-X Implants

All-on-X is a dental implant option provided by Sparkle Dental used to replace a full arch of teeth.

The dental treatment for All-On-X has the end goal of replacing a set of severely compromised teeth (or no teeth at all) by utilising a minimum of four dental implants with a set of 10 – 14 teeth.

Single and Multiple Dental Implants

- **Single tooth implant**

A single tooth implant looks, feels and functions very similar to a natural tooth, making it a simple solution for your smile and the preferred long-term option. As it mimics the contours, shape and form of natural teeth and is fixed in your mouth, once fitted, it becomes a part of you.

- **Multiple tooth implant**

A multiple teeth implant also looks, feels and functions very similar to a natural tooth, making it the preferred long-term treatment option over other alternatives. As it mimics the contours, shape and form of natural teeth and is fixed in your mouth, once fitted, it becomes a part of you.

Implant Dentures

At Sparkle Dental, we offer a long-term solution to the problem of loose dentures, with overdentures using dental implants to hold them securely in place.

Whether you've worn removable dentures for many years and are tired of trying to keep them in place or are considering dentures and aren't sure which option is right for you, we can help.

Sedation Dentistry

Does the thought of going to the dentist make you anxious and uneasy?

If the thought of going to the dentist makes you nervous or you avoid the dentist altogether, know that you're not alone.

There's a multitude of reasons why people put off dental visits:

- Fearful due to past experience or misconceptions about dental examinations
- Worried about the possibility of pain
- Scared of the prospect of needles and strange instruments
- Embarrassed and ashamed of the state of your teeth.

This could seriously impact the state of your smile if you don't keep up with your routine dental visits. Thankfully, there is another way – sedation dentistry.

What is Sedation Dentistry?

Sleep dentistry is a service especially designed to provide the highest levels of comfort for patients during a dental procedure, ensuring even those fearful of the dentist, can achieve optimal dental health. Even if you're not particularly fearful of the dentist, you may understandably, prefer to experience a particular procedure under sedation.

As an advanced form of dental sedation, sleep dentistry uses a combination of sedative and pain-relieving drugs given intravenously to create a dream-like state of deep, calming relaxation throughout your procedure.

At Sparkle Dental, we offer five types of sedation dentistry to help you feel relaxed and comfortable while you sleep soundly through your treatment. Find out more about sedation dentistry options in our dedicated brochure. Please ask for a copy.

Cosmetic Dentistry

Are you ready for a smile you'll love?

Cosmetic dentistry could be exactly what you need to regain your confidence and acquire a beautiful, healthy smile expertly designed just for you.

At Sparkle Dental, we have years of experience and training in cosmetic dentistry treatments, the latest technology and digital techniques including porcelain veneers, dental crowns, and teeth whitening.

Find out more about all of these options in our specialist brochure. Ask us for a copy.

Porcelain Veneers

Porcelain veneers are thin shells applied to the front surface of teeth to aid in a number of cosmetic dentistry corrections – expertly handcrafted porcelain veneers provide a natural looking, beautiful smile.

Porcelain Veneers are perfect for:

- Covering up discoloured teeth
- Closing or minimising gaps between teeth
- Restoring chipped or broken teeth
- Correcting unevenly shaped teeth
- Restoring worn teeth
- Correcting slightly misaligned teeth
- Repairing teeth that are too small

Digital Smile Design & Smile Test Drive

With the latest in dental digital technology, Digital Smile Design and Smile Test Drive allow you to preview and experience your brand-new smile, before your treatment has even begun.

Using the latest technology in Digital Smile Design, you'll have the opportunity to review an on-screen mock-up of your beautiful new smile.

Smile Test Drive technology allows you to actually test drive your new smile before committing to treatment. Following review of digital oral photos, dynamic videos of you speaking, and tooth impressions, our high-precision 3D printing technology will create a wearable prototype 'mock-up' of your new teeth, allowing you to see exactly how your new smile will look and feel.

Dental Crowns

A dental crown (sometimes referred to as a cap) covers the entire tooth, right down to the gum line, completely sealing up the tooth. It replicates a natural tooth, helping restore strength and integrity to a tooth, badly damaged due to decay or trauma.

At Sparkle Dental, we have the latest technology and innovative digital techniques to ensure you get the best dental implant service.

Dental Crowns are perfect for:

- Protecting and restoring a severely worn or broken-down tooth
- Covering up misshapen / discoloured tooth
- Providing additional support to a tooth with a very large filling
- Protecting a weakened tooth due to trauma or decay
- Aesthetics for a cosmetic smile makeover
- Supporting a dental bridge

Teeth Whitening

Feel like your teeth have lost their sparkle? Whiter and brighter teeth are possible with our professional teeth whitening services.

In-Chair Whitening

Our in-chair teeth whitening service includes a consultation and a one-hour whitening session.

Take-Home Whitening

Our take-home teeth whitening service includes a consultation, impressions for you to take home and a teeth whitening kit. Whiten your teeth in the comfort of your own home for a minimum of two hours at a time.

Invisalign and Clear Aligners

Invisalign is the world's leading tooth straightening system, designed to treat most cases of crooked or misaligned teeth and unlike braces, are virtually invisible.

Kid's Dentistry

As a parent, you're looking for a dentist your kids feel safe and comfortable with and you can trust. As kid's dentistry professionals, we're the team you can trust to make your kids smile, even in the dentist chair.

By introducing your child to a dentist and an oral hygiene routine from an early age, you're helping them maintain optimal oral health for life.

At Sparkle Dental, we're entirely dedicated and committed to providing a safe space for children to get motivated, involved and informed when it comes to their oral health and hygiene.

Healthy teeth for kids at Sparkle Dental means:

- Recognising the possibility of and developing strategies to prevent poor facial growth patterns
- Teeth free from decay
- Ensuring healthy gums and oral soft tissues
- Promotion of adequate nasal breathing to allow for great oxygen supply
- Developing a good bite and healthy jaw joint
- Making speech sounds correctly

Kid's General Dental Services include:

Dental check-ups and cleaning

Regular dental check-ups and cleaning help ensure the best oral health for your child.

Fissure seals

A protective coating applied to the chewing surfaces of your child's teeth to prevent cavities.

Crowns and fillings

Designed to repair minor to moderate tooth damage, a filling will make your child's smile safer from additional decay and healthier.

Tooth extractions

Teeth extractions are sometimes necessary due to severe decay or crowding.

Mouth guards

Essential for children when playing sport, mouthguards help protect your child's teeth.

Growth Monitoring

Dr Shereen Lim has additional training in the areas of dental sleep medicine and tongue-tie release for infants, and uses interceptive treatments to allow children to maximise their growth curves, through instilling the correct breathing and sleep practices. This encourages ideal jaw development which will then hopefully minimise any teeth malalignments, but more importantly, allowing the child to thrive avoiding possible issues later in life such as obstructive sleep apnoea.

Orientation rides

If you're an existing patient and don't feel quite ready to book an appointment for your child, come in for an orientation ride in the dental chair for your child. They'll see how it feels to sit in the dentist chair, in a fun and relaxed way, and enjoy stickers and even prizes for being so brave.

Medicare Child Dental Benefits Scheme

The Medicare Child Dental Benefits Schemes is a Commonwealth Government initiative which provides up to \$1,000 for basic dental care to:

- Children aged between the ages of 2 and 17
- Children belonging to a family that receives Family Tax Benefits

The Child Dental Benefit Scheme covers:

- Dental check-ups and cleans
- Fissure sealants
- Fillings
- Dental X-rays
- Extractions
- Root canals

At Sparkle Dental, we welcome children eligible for the Child Dental Benefit Scheme.

If you're unsure whether your child is eligible or want more information about the scheme, visit the Australian Government website.

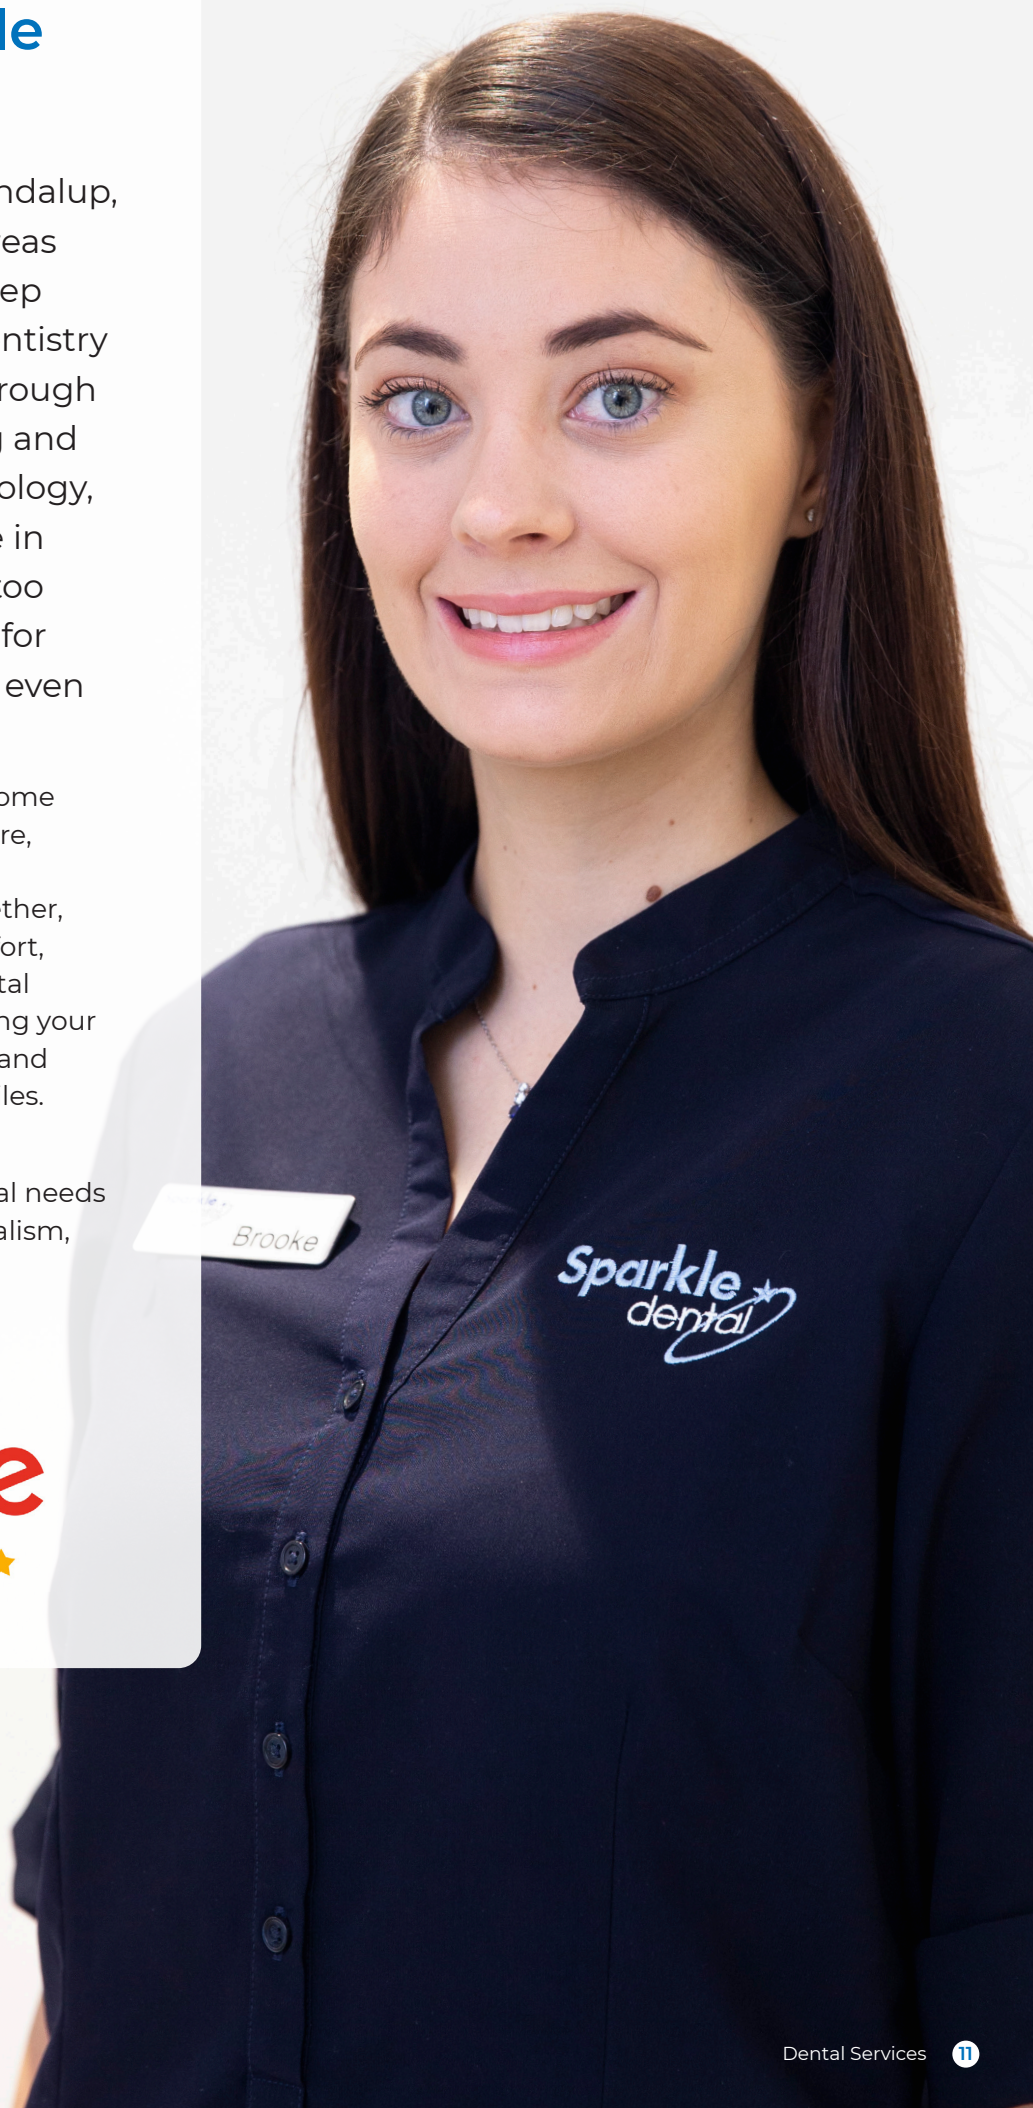

About Sparkle Dental

At Sparkle Dental Joondalup, we're experts in the areas of dental implants, sleep dentistry, cosmetic dentistry and kid's dentistry. Through our high-level training and state-of-the-art technology, we restore confidence in people who have felt too embarrassed to smile for years, and sometimes even decades.

Our team are ready to welcome you and your family with care, understanding, education, safety and experience. Together, we're focused on your comfort, and providing the best dental experience possible, reducing your fear of going to the dentist and creating healthy, happy smiles.

Rest assured that the best treatment for your individual needs will be met with professionalism, care and compassion.
